

## **MongoDB Aggregation Operation**

**Note:** Use mongoose framework only.

**Table Name:** users

**Columns:** name, mobile, email, is\_active, created\_at (All mandatory fields)

**Table Name:** user\_profiles

**Columns:** user: <users table ref>, age, dob, marital\_status (only "user, dob age" mandatory fields)

Add 10 sample users (email must be unique & minimum 6 users must be active).

## **Aggregation Tasks**

1. Find all the inactive users with sort by created\_at desc
2. Find all the users above 18 years of age
3. Find all the users where the marital\_status = null
4. Find all the users born after 2000
